

Inexpensive Assistive Technology for Independent Living

Bob Paradiso, demonstrates devices on "Hart of New York Show"

ICS rehab engineer Bob Paradiso creates custom assistive technology for ICS members when needed. However, in many cases inexpensive, easy-

to-install, off-the-shelf items can allow older adults or those with disabilities to live more independently in their homes. With the push of a button or

a simple voice command, even someone with extremely limited mobility can control common household appliances.

Bob recently demonstrated these simple but powerful tech fixes on the Hart of New York show. You can watch his demonstration by typing this link into your browser <https://bit.ly/2KcszWy>.

You can also find it on the videos section of the ICS YouTube page.

Being able to function in your own home is obviously a key to independent living. Bob has created gadgets that can help someone with

a disability open their refrigerator door, roll window shades up and down, or use a telephone for the first time in years. He's developed systems to allow someone with very limited mobility to use eye movements to control a motorized wheelchair, a motorized grabber that can pick up and move small objects, or control household objects like lamps and fans.

These kinds of solutions can dramatically increase a person's independence.

ICS is thrilled to be able to make Bob's services available to our members.
